RUBICO Green Fast-Drying courts. William Randolph Hearst Estate, Sands Point, Long Island, N. Y.,

The trend in modern tennis court construction and resurfacing is definitely toward a fast-drying solid green surface. RUBICO Tennis Courts are the ultimate solution of many years of experiments in the search for this permanent pervious surface upon which tennis can be played regardless of weather conditions and still be within the financial means of clubs, schools, hotels, recreation departments, and private individuals. RUBICO Courts cost less to construct and maintain than any modern type of resilient tennis court.

MODERNIZE WITH RUBICO

RUBICO fast-drying tennis courts are installed at the better clubs, colleges, recreation departments, and private estates. RUBICO surfacing materials have also transformed many unsatisfactory types of tennis courts to the modern green fast-drying surface so popular today.

Repeat orders from RUBICO customers for additional RUBICO courts indicate absolute satisfaction. Outstanding tennis court owners such as the Cold Spring Harbor Beach Club, Mountain Ridge Country Club, Woodway Country Club, White Plains Recreation Department, Yale University as well as many others have ordered new RUBICO fast-drying courts and surfaces during the past 10 years.

In 1934 one RUBICO court was installed at the Memphis Country Club in Tennessee, followed by two more in 1935, two in 1937, and two in 1939, making a total of 7 RUBICO Green Fast-Drying Tennis Courts at this famous southern club.

RUB

FAST-DRYING TOP-DRESSING RED OR GREEN

DESCRIPTION: RUBICO TOP-DRESSING material is available in two permanent colors — RED or GREEN. It is a natural stone composition (no dyes or pigments used) which is processed and ground to an exacting specification and is shipped in 100 lb. bags ready for use.

APPLICATION: RUBICO TOP-DRESSING is applied over the entire area of the tennis court. Fifty (50) bags of top-dressing will cover a standard size court, 60 feet by 120 feet to a depth of 1/32 of an inch. The application of the material is simple, and the work can be performed in a day by the groundsman or tennis court attendant. Complete directions are furnished with all orders.

PURPOSE & ADVANTAGE: The purpose of treating your court with RUBICO is to give you the most economical method of obtaining a satisfactory top-dressed court in a red or green color, without going to the expense of rebuilding your entire present court. While the application of RUBICO TOP-DRESSING (or any other dressing material) will not build you a complete new fast-drying court, it will greatly improve and modernize your present type of clay or dirt tennis court. Courts top-dressed with RUBICO are dustless, glareless, and the red or green materials harmonize with any landscaping. Visibility is improved, and a true bound to the ball and even footing is assured. The granular nature of the material tends to make the court fast-drying and the groundsman or attendant can groom the court shortly after rains. In hot dry weather the dressing eliminates eye-strain and dusting, and prevents unraveling and scuffing of the court's clay surface. Tennis courts treated with RUBICO TOP-DRESSINGS will save many matches from being washed out this season due to wet grounds, as well as providing many additional enjoyable playing hours. A RUBICO TOP-DRESSED court is the next best thing to having a complete RUBICO FAST-DRYING SURFACED court.

PRICE: Due to advanced methods of mining and manufacturing our materials, RUBICO TOP-DRESSINGS can now be sold at a low price within the reach of every tennis court owner. At the present time it costs less to top-dress your court with RUBICO and enjoy its many advantages, than to top-dress your court yearly with clay according to the old fashioned standards. RUBICO TOP-DRESSING in RED or GREEN costs \$1.00 per 100 lb. bag F.O.B. our plants in Pennsylvania. There is no advantage in applying more than the standard 50 bags of RUBICO TOP-DRESSING per court at the initial treatment — yearly applications of 10 bags of material will keep the court in perfect playing condition.

I C O

FAST-DRYING GREEN-SURFACING

DESCRIPTION: RUBICO SURFACING material is available in GREEN only. It is a natural stone composition, granulated and prepared to an exacting specification and mixed with a dry binding element which acts as the controlling factor for its application. The material is shipped in 100 lb. bags ready for use. It is used in the construction of new fast-drying tennis courts, and in the complete resurfacing of present unsatisfactory courts.

APPLICATION: RUBICO SURFACING may be applied directly over your present court, or upon a four inch porous sub-base foundation. Five hundred (500) 100 lb. bags are required to give a solid one inch green fast-drying pervious surface. For lighter construction, three hundred (300) bags can be applied the first season and gradually added to until the full one inch is secured. The work can be performed by local unskilled labor and complete directions for applying are supplied at no additional charge; or if preferred, we are prepared to contract for the complete installation from beginning to end supplying labor and materials at an agreed price.

PURPOSE & ADVANTAGE: The purpose of RUBICO SURFACING is to modernize any unsatisfactory tennis court by transforming it immediately to the RUBICO FAST-DRYING "COURT OF CHAMPIONS" which is approved by the United States Lawn Tennis Association for Davis Cup tryouts and for all tournament play. RUBICO COURTS fulfill a long felt need in the tennis field for a surface that may be played upon almost immediately after rains and from early Spring until late Fall. RUBICO SURFACING offers the following advantages — the solid surface is guaranteed as to permanent color right through to the foundation, and should not be confused with top-dressed clay courts. The material is manufactured so that it is fast-drying, resilient, dustless, glareless, will not soil clothing or discolor tennis balls, will not crack, washout, or blow away, and requires a minimum of maintenance and upkeep. Records prove that no more than 10 bags of additional material yearly are needed to keep the court in championship play. Tests show that RUBICO SURFACED COURTS require less maintenance than any other pervious fast-drying court on the market, and about ½ the amount needed on clay surfaced courts. An added feature lies in the fact that RUBICO SURFACINGS may be flooded to permit ice skating during the Winter months without any injurious effect to the court.

PRICE: RUBICO GREEN SURFACING is priced at \$1.50 per 100 lb. bag, F.O.B. our plants in Pennsylvania, and should be applied in quantities of from 300 to 600 bags per court for satisfactory results. This is the same material that we use when constructing our complete DeLuxe Fast-Drying tennis courts. It now costs less to resurface your present court with RUBICO SURFACINGS than with any other type of satisfactory fast-drying surfacing materials on the market today.

The RUBIEN CONSTRUCTION COMPANY specializes in all types of athletic design and construction such as—athletic fields, cinder running-tracks, base-ball diamonds, football gridirons, hand-ball courts, basketball courts, tennis and badminton courts, swimming pools, ice hockey rinks, polo fields and portable board running-tracks. We are also consulting engineers for colleges, schools, recreation departments and all Olympic Games stadia.
